## Kitty Corral Cat Fence Gate Installation Instructions

1. Using the table below, measure out the respective distance, matching your gate width, from the OUTSIDE EDGE of one GROUND SLEEVE (E) to the OUTSIDE EDGE of your second GROUND SLEEVE (E).

| Gate Width | Sleeve <br> Placement |
| :---: | :---: |
| $3^{\prime}$ Gate | $393 / 4^{\prime \prime}$ |
| $4^{\prime}$ Gate | $513 / 4^{\prime \prime}$ |
| $5^{\prime}$ Gate | $633 / 4^{\prime \prime}$ |
| $6^{\prime}$ Gate | $753 / 4^{\prime \prime}$ |
| 7' Gate | $873 / 4^{\prime \prime}$ |

2. Using a DRIVE CAP (Sold Seperately; SKU: DE2810) and a sledgehammer, drive the GROUND
SLEEVES (F) into the ground leaving $1 / 2$ " above ground to keep out debris and allow for securing the post. Care should be taken to ensure that the sleeves are as straight as possible.

Note: On hard ground it may be necessary to use an EARTH AUGER (Sold Separately; SKU: DE8188) or DIGGING BAR to make a hole before driving the ground sleeves in.

2.

5. Insert VERTICAL GATE DOOR POST (C) into CORNER ELBOW (G). Then slide in the HORIZONTAL GATE DOOR POST (B) into the CORNER ELBOW (G) so that it presses tightly against the VERTICAL POST (C). Secure the POSTS inside the CORNER ELBOWS (G) using 32 SELF-TAPPING SCREWS (N).

Note: It is important that the vertical post is inserted into the corner elbow first. If properly assembled, you should be able to look all the way down the vertical pipe. Take care to ensure all the posts are all the way in the corner bracket or the gate door will not fit properly.
5.

4 Screws per Bracket Front \& Back of Gate Frame

6. Open the TURNBUCKLE
(I) by twisting both ends. Place the hook end of one TURNBUCKLE (I) through the hole in one top CORNER ELBOW (G) and stretch the cable diagonally to the hole in the bottom CORNER ELBOW (G). Pass the cable through the CONNECTION CLIP (K) and then through the hole in the CORNER ELBOW (G). Pass the end of the cable through the CONNECTION CLIP (K) again. Position the CONNECTION CLIP (K) close to the CORNER ELBOW (G) and tighten using the small nuts. Repeat on the opposite side creating an " X " across the gate. Use the TURNBUCKLE (I) to tighten the cable.
6.

7. Set one MALE HINGE (J) right above the bottom SPREADER BAR (D), facing upwards, on a LINE POST (A). Set the CORNER ELBOW (G) of the gate door on the bottom hinge and tighten the hinge bolt. Place another MALE HINGE (J), facing downwards, on the same LINE POST (A), sliding into the top CORNER ELBOW (G) of the gate door, then the tighten hinge bolt.
7.

8. Attach top SPREADER BAR
(D) directly above the gate door using the END
CLAMPS (H) on either side of the gate frame. Fasten the END CLAMPS (H) using the CARRIAGE BOLT (M).

Note: This is the same process as described in STEP 4.
9. Attach the GATE LATCH (L) to the GATE DOOR at a comfortable and desired height. Cover the entire GATE DOOR with your fencing mesh (NOT INCLUDED) and fasten the mesh to the GATE DOOR using SELF-LOCKING TIES (O). Trim excess as needed.

Note: You do not need a tie for every square on the mesh. We recommend 1 tie for every 1 ' along the pipe of the gate door.
8.

9.
